Why Keep Records?

By keeping records, you will be able to see how much progress you make this year and over the course of your 4-H/FFA career as you set goals and work to accomplish them.

Good records will:

- Help you learn about animals, their rate of growth, the feed they require, the cost of the feed they require and their habits.
- Increase understanding of your project's financial outcome.
- Assist you in gathering information to market your animal.
- Improve your management practices.
- Keep track of your project activities and learning experiences.
- Allow you to better plan for future livestock projects.

If you have questions or need help on this record book, please contact your leader, parent/guardian, agricultural educator, or extension office.

PLEASE PRINT OR WRITE CLEARLY.

Project Information

Submit <u>ONE</u> completed record book for each exhibitor.

Project Reflection

Directions: To receive the most points, answers should be well thought-out with complete sentences and correct grammar.

1.) What marketing techniques did you use to market your animals for this year's sale and why did you choose those techniques?

2.) What was the most challenging part of your livestock projects this year and why?

3.) What is something new you learned through your livestock project this year and how will you use this new knowledge in the future?

4.) Name one person who positively impacted your livestock project this year. This person could be a parent/guardian, teacher, club leader, fellow exhibitor, etc. How did they help you and why are you thankful for them? (Also, take time to write them a thank you note. It won't get you extra points here, but they will surely appreciate it.)

5.) How has your time in FFA and/or 4-H impacted your life? What have you learned, what opportunities have you had, and how will this help you in the future?

6.) Imagine you are speaking with someone who knows nothing about livestock or agriculture. What would you want them to know about agriculture, the livestock industry, and/or 4-H and FFA?

Project Photos

Please include at least two photos.

Judges Comments:

Production Calculations

Average Daily Gain (ADG): The average amount of weight an animal has gained each day for a given period of time that the animal has been on feed.

ADG = End Weight – Beginning Weight / Days on Feed

Example: Market Lamb

- 120 lb. end weight
- 75 lb. beginning weight
- 60 days on feed

ADG = (120-75) = 45

ADG = 45lbs. gained/60 days on feed

ADG = 0.75lbs per day

Feed Conversion (FC): The amount of feed required for each pound of an animal gains.

FC = Total pounds of feed / Total weight gained

Example: Market Goat Project

- Goat ate 150 lbs. of feed (hay, grain, etc.)
- The goat gained 50 lbs. while on feed

FC = 150lbs of feed eaten / 50lbs gained

FC = 3lbs of feed for each pound gained

Feed Cost Per Pound of Gain: The amount it costs for each pound gained by an animal

Feed Cost per lb of gain = Total cost of Feed the animal ate / pounds the animal gained

Example: Market Hog Project

- Your pig ate 15 bags of feed at $20.00/bag ($300.00)
- The pig gained 200lbs

Feed Cost per lb of gain = $300 / 200lbs. =$1.50 per pound of gain

Break Even Cost: the total amount of money an animal must be sold for to cover all the costs associated with raising the animal.

Break Even Cost = Total Cost of all Inputs / Sale Weight

Example: Market Lamb Project

- 125 lb Market Lamb
- Total cost for project $693.00

Break Even Costs = $693.00/125lbs

Break Even Costs = $5.54 per lb

Estimated Carcass Weight (ECW): How much your animal's carcass is expected to weigh once the animal has been processed.

ECW = live weight X dressing % (use average for the species)

Dressing Percentage Averages

- Hogs – 70%
- Steers – 60%
- Lambs – 50%
- Goats – 45%

Example: Market Hog Project

- Live weight – 265lbs
- Average Dressing Percent for hogs =70%

ECW = 265 X 70%

ECW = 265 X .70

ECW = 185.50lbs

Performance Ratio: a measure of how your animal's performance for a given trait compares to the average performance of the group for that trait. You could do this for ADG (average daily gain) or carcass traits if your fair collects carcass data. Briefly explain what the number means.

Ratio = (individual animal value for trait ÷ group average for trait being measured) x 100

Example: Beef Project – Average Daily Gain

• Your animal's ADG value = 2.85 lbs/day

• Group average for ADG = 3.05 lbs/day

• This means your animal performed 6% below the other animals in the group

Ratio = 2.85 ADG ÷ 3.05 ADG

Ratio = .9344 x 100

Ratio = 93.44

Sale Commission Fee – All Species $5.00
